Avaya Headset Guarantee

In an effort to ensure that Avaya products provide our customers with the highest levels of safety and quality, Avaya supports only those headsets and headset adapters that carry an Avaya brand.

Avaya's headsets and headset adapters are designed to work in concert with Avaya terminals to protect customers from electrical and acoustic shock. While it is possible for a non-Avaya headset to achieve a satisfactory level of customer safety, Avaya's formal testing and Declaration of Conformity are based only on the headsets that carry the Avaya brand. As a result, Avaya makes no representations regarding whether a particular non-Avaya headset will work with Avaya's terminals.

From a technical perspective, there is no industry standard for headset interfaces. The headset interface in Avaya's terminals is different than that used by Avaya's competitors, therefore, any claim made by a headset vendor that its product is compatible with Avaya terminals does not equate to a guarantee that the headset will provide adequate safety protection or that the headset will not damage the terminal. In fact, some non-Avaya headsets have demonstrated to cause premature failure in Avaya terminals where damage can be the result of repeated use and not something that would be immediately obvious.

Avaya believes that our customers consider safety and quality as two essential priorities when selecting products and support services from a telecommunications vendor. Therefore, Avaya has determined that supporting only those headsets which carry an Avaya brand, is an important way to meet these customer priorities.
