

Unite your enterprise voice

Step smartly into Unified Communications
with the MDA200™ Headset Communications Hub

plantronics®

Uniquely designed to solve the communication challenges of businesses migrating to Unified Communications, the MDA200 lets you manage PC voice and multi-media, while maintaining connectivity to your desk phone.

Work the desk phone. Launch the softphone. Even take calls on the mobile, when using a Plantronics Bluetooth® USB headset.

The MDA200 is plug-and-play and compatible with all major UC applications so you can rapidly deploy it for flex-space, hoteling, teleworking, call centers, UC transitioning, and more. It's the simple, seamless solution for an enterprise that just can't sit still.

Read on to learn new ways to simplify your communications using the MDA200. ▶▶▶

Switch your Unified Communications strategy to now

Flex-space and hoteling environments are becoming a common trend as enterprises embrace a work-where-you-are philosophy. The employees in this type of work environment no longer work at a fixed desk, so they are not usually sitting in the same place every day, but they need to be able to connect and communicate quickly and easily.

Other enterprises may be migrating toward PC-based communications but still have desk phones, and in some cases, a significant investment in desk phone headsets. They want to keep their desk phones and existing headsets as they migrate toward more PC-based communications.

Scenario 1

PAIRED UP:
MDA200 + Blackwire® corded USB headset

You arrive at work and settle into an unassigned desk that has a desk phone and a docking station. With the MDA200 hooked up to your desk phone and PC, all you need to do is plug your favorite corded USB headset, like the Blackwire 420, into the MDA200 and you are ready to make and accept calls from your PC *and* desk phone.

Scenario 2

PAIRED UP:
MDA200 + Voyager® PRO UC

This scenario is similar to the first, except your favorite headset happens to be the Voyager PRO UC. On its own, it's a wireless solution that connects to both the PC and mobile phone. However, when the Voyager PRO UC mini USB adapter is plugged into the MDA200, calls can be made from the PC, the desk phone *and* the mobile phone.

Scenario 3

PAIRED UP:
MDA200 + DA45™ + SupraPlus® wideband

Enterprises or call centers who already have made a significant investment in corded Plantronics desk phone headsets, like the SupraPlus wideband, can add a DA45 USB adapter to the MDA200 and get instant connectivity to both PC *and* desk phone—without breaking the bank.
